Category	Score (X / 5)	Notes & Commentary from Officials
Site assessment and creation of plan	4.5	Awesome assessment and 911 call All information expertly conveyed to emergency services Identification of hazards. Thorough 911 call. Establishment of work zone. Good comms, but everyone shouting over one another. Would prefer to see a chain of command. Good identification of the hazards, limb and bees. Good detail provided to EMS. Nice job of using the cones to mark the dead branch on the ground.
Contacted emergency services; quality of explanation and info provided	5.0	
Efficiency, speed, and safety	4.5	Smooth and effective ascent Very wise to ascend with some bee protection and initially away from the swarmed victim Smooth efficient ascent. Good team comms. Detailed plan, addressed the hazards and set up the access and lowering.
Continued inspection and assessment	4.8	
Identification of hazards	5.0	Stayed out from under the hazard the whole time They had bee spray but the breathing emergency took precedence so they proceeded while constantly acknowledging other hazards Bees and dead limb identified. Bee spray and clothing prepared. Drop zone marked. Casualty and crew kept clear of dead limb. Good identification of the hazards and mitigation, avoidance of the limb, use of bee spray and using a climber who isn't allergic to bees.
Method and execution of mitigation	5.0	
Assessment of casualty situation	4.5	Didn't package the victim but couldn't cause they didn't want to put themselves under the dead limb The team adjusted their plan as things changed and the bees continued to maul them. Ground assessment of casualty. Urgency discussed. Good plan considering the injuries.
Administration of first aid & assessing of urgency	4.5	
Adequate and appropriate stabilization of casualty for transport	4.5	
Choice of system and technical execution of casualty support/tie in	4.8	Rescue was smooth and efficient This was done "remotely" which was wise but the lowering suffered a little. A little. Clever use of belay. Good job untying the fimbsaver instead of cutting it. Focus on safety for all.
Quality of transport for the casualty	4.8	
Quality of transition from suspension to injury appropriate position on ground	4.8	Excellent patient care! Moving the victim out of the swarm was well played. Moving a victim is generally discouraged but this needed to be done. Would like to see someone holding tail of casualty's climbing line as pole saw released hitch. A few jerky movements as casualty neared ground. Some clutter on site. Urgency in moving away from bees and providing CPR. Good job of communicating with EMS on site.
Care of site, scene, and equipment	4.5	
Transition of care to EMS	5.0	
Communicating the plan	4.5	Great communication to the victim and the entire team! Everyone made themselves clear Team worked well, but no clear leader. Overall just a bit hectic. A little hectic in the beginning but solid plan and delegation of duties.
Communicating the hazards	4.5	
Communicating with, for, and about the casualty	4.8	
Reaction	4.8	This was a fantastic rescue!! I only knew this was not a real rescue because it was on YouTube and...well...the victim was a dummy. Well done everyone. Very realistic. Good overall, realistic energy!
Planning	4.8	
Overall Realism	4.8
