Category	Score (X / 5)	Notes & Commentary from Officials
Site assessment and creation of plan	4.0	Didn't really do a full tree inspection   awesome   Good assessment and delegation of responsibilities. Limb and bees identified. Didn't really hear a plan communicated. EMS call cutting in and out, but sounded thorough.   Good identification of the hazards.
Contacted emergency services; quality of explanation and info provided	4.5	
Efficiency, speed, and safety	4.0	Not a lot of communication coming from the rescuer   constant and thorough   Smooth ascent. Rope jostling casualty. Continued casualty assessment and comms with team.   Good communication with the injured and the team on the ground.
Continued inspection and assessment	3.8	
Identification of hazards	3.8	Nothing done about the hazard except to steer clear of it, but they were all directly below it almost the whole time   acknowledge and avoid. Nice   Crew walking under dead limb. Rescuer under dead limb for a short period while aloft, but moved himself and casualty clear.   Identified the hazard and worked to avoid it.
Method and execution of mitigation	3.3	
Assessment of casualty situation	3.5	Poor patient care aloft. The lanyard around the back did nothing. Rescuer should have stayed above the victim and established a hard connect right away.   again constant and very thorough   Assessed casualty while aloft and communicated to team. No first aid. Some attempt at packaging, but otherwise not the greatest casualty handling.   Identified the injury, bee stings, from the ground and packaging was appropriate for the injury.
Administration of first aid & assessing of urgency	3.3	
Adequate and appropriate stabilization of casualty for transport	3.3	
Choice of system and technical execution of casualty support/tie in	4.0	It wasn't very smooth or fast. Kind of just ok. The patient looked very uncomfortable till he was laying on the ground   good hands on descent   Good use of two climbing systems.   Overall, good focus on safety instead of speed. Bumped the injured a few times during the ascent and packaging.
Quality of transport for the casualty	3.8	
Quality of transition from suspension to injury appropriate position on ground	4.8	Loved the recovery position, that was smart. But everything they said was super hard to hear   several nice backhand tosses of sticks out of the scene.   Neck supported. Clean site. Good explanation of injuries to EMS.   Good job of creating a dry landing area and control of the injured to the ground.
Care of site, scene, and equipment	4.8	
Transition of care to EMS	4.3	
Communicating the plan	4.0	Most of their communication was good. The rescuer could have talked to and reassured the victim more   clear and easy to understand   Overall decent comms. Dead limb hazard discussed at beginning, but not really considered afterward.   Good overall communication.
Communicating the hazards	4.0	
Communicating with, for, and about the casualty	3.8	
Reaction	3.8	It all seemed a bit too acted and pretty slow to start. No real urgency was displayed   This was just textbook.   Decent role play.   Good overall.
Planning	3.8	
Overall Realism	3.8
