MAIN EVENT DRY MANGANESE

Precaution: Main Event Dry Manganese is a highly concentrated material. Exercise precautions to prevent potential plant injury or soil media pH changes. If applying Main Event Dry Manganese in combination with other materials, a compatibility test is recommended to avoid potential incompatibilities. Prior to the addition of Main Event Dry Manganese to a spray mix, the user or application advisor must have experience with the combination or should have conducted a phytotoxicity trial. Staining is greatly reduced due to the high degree of chelation of the product as compared to other Manganese compounds but cannot be guaranteed because of rate used, skill of applicator or surface applied to.
