## HTP™ STATIC

### 100% High Tenacity Polyester Static Rope

- Super low elongation
- Low electrical conductivity
- Remains supple after extensive use
- The feel, handling, and knotability of dynamic rope
- Naturally dry fiber resists moisture
- Superior abrasion resistance
- Better UV and chemical resistance
- Better efficiency in mechanical advantage systems
- Great compatibility with most standard equipment
- Best rope for highlines
- Certified to NFPA 1983, 2006 edition

**9 MM"** → MBS of 5049 lbs. Ideal for haul lines, anchor systems, and taglines.

**3/8"** → MBS of 5981 lbs. Ideal for light - use rescue, haul lines, anchors, and z-drag systems.

**7/16"** → New and improved. MBS of 7667 lbs. Durable, extremely low stretch is perfect for rope access, rescue haul systems, and mountain rescue.

**1/2"** → MBS of 9084 lbs. Low elongation makes it the top choice for mainline, haul systems, and highline use.

**5/8"** → MBS of over 11,962 lbs makes this our strongest rope. Great for tower construction, bridge work, and industrial safety.
